# Iron Gate®

Micronizer System

**Automatic Backwashing Valve**

**Meter Control** monitors water use and operates the **Auto Mini Air Pump**.

**Excess Air Out**

**Un-Filtered Water Sample Tap**

**Filtered Water Sample Tap**

The **Iron Gate Filter** traps the iron, manganese and sulfur to eliminate iron and manganese staining, rotten egg odors, murky water, sediment, and acid water.

The **Iron Gate Micronizer** causes air to be drawn into the water stream when water is flowing.

The **Iron Gate Micronizer** is designed to work with submersible well pump installations operated by a pressure switch and pressure tank.

The **Iron Gate Aeration Tank** naturally mixes air with water to precipitate iron and manganese, and sulfur odor.
