REPCO™ Airregen™

Whole House Water Treatment

www.represcott.com

REPCO™ Airregen™

The REPCO™ **Airregen™** head operates the **Airregen™** pump.

Choice of Filter Media available to suite your application needs

The **Airregen™** uses natural air oxidation and filter media to treat water, leaving you with clean, clear, odorless water.

The **Airregen™** aeration tank naturally mixes air with water to precipitate iron and manganese and sulfur odor.

Advantages of using the **Airregen™** System rather than a nozzle and venturi air draw:

- Airregen™** eliminates nuisance iron clogging of nozzle and venturi.
- Wastes no water by eliminating the waste caused by using a nozzle and venturi.
- Average water conservation of 3,000 gallons per year.

The **Airregen™** comes with a wall mount bracket.
